Services

The main activity of our company is quality, repair, rework, component repair services.

Quality-oriented, highly qualified repair group, it is possible to complete repair departments, or employees, or managers "for hire" who work under the customer's premises. It also assumes that labor training of education. So far we were mainly related electronics companies in the field.

- The Philips to continue working together since 2006, incoming goods inspection, rework, assembly, sorting areas.
- The Nokia BGA solder joints were performed more than 1 year.
- Elcoteq at ESD environments and performed error correction activities.
- Currently, Harman at the work, which is an important requirement for compliance with automotive standards.

Visual inspections

- supplies and visual inspection of manufactured parts. (Principal partner, the external site or at our premises)
- installation, machining, visual and instrumental piece filtration checks before the start of the faulty components, thus improving the manufacturing processes, quality indicators.
- A final inspection of manufactured products to reduce customer complaints and instructions, such that the quality indicators are rising.

Incoming goods inspection

- supplies inventory control, and is not at fault for defective products. (Principal partner, the external site or at our premises).
- undertake testing of incoming goods based on receipt of the required parameters.
- Shaped Fold, Sliding meter, micrometer, and exclude the use of other measuring instrument checks that products not meeting the requirements are included in the manufacturing process.

Production support direkt by line

- acquire the knowledge production in Our time is short. (Principal partner).
- production line or other production processes used fixed or indefinite period of time then too.
- High quality work will help to ensure the required quality parameters and production quantities.
